Per the Illinois Compiled Statutes, 625 ILCS 5/11-208.6 Automated Traffic Law Enforcement System:

(k-7) A municipality or county operating an automated traffic law enforcement system shall conduct a statistical analysis to assess the safety impact of each automated traffic law enforcement system at an intersection following installation of the system. The statistical analysis shall be based upon the best available crash traffic and other data, and shall cover a period of time before and after installation of the system sufficient to provide a statistically valid comparison of safety impact. The statistical analysis shall be consistent with professional judgment and acceptable industry practice. The statistical analysis also shall be consistent with the data required for valid comparisons of before and after conditions and shall be conducted within a reasonable period following the installation of the automated traffic law enforcement system. The statistical analysis required by this subsection (k-7) shall be made available to the public and shall be published on the website of the municipality or county. If the statistical analysis for the 36-month period following installation of the system indicates that there has been an increase in the rate of accidents at the approach to the intersection monitored by the system, the municipality or county shall undertake additional studies to determine the cause and severity of the accidents, and may take any action that it determines is necessary or appropriate to reduce the number or severity of the accidents at that intersection.

A Red Light Running (RLR) Photo Enforcement System was installed at the intersection of Grand Avenue and Thatcher Avenue on April 5, 2008 (eastbound) and on April 15, 2008 (southbound), after finding limited success with other attempted measures to promote safer driving and improve compliance with traffic laws. The following statistical analysis was performed through 2015. Calendar year 2016 was not included as the Illinois Department of Transportation (IDOT) has not yet completed collecting all data. The statistical analysis will be updated annually, as collected data becomes available from IDOT.
Grand Ave. & Thatcher Ave.
River Grove, IL

- RLR Photo Enforcement Systems monitor violations occurring on the eastbound and southbound approaches of the intersection
- RLR Photo Enforcement Systems installed: April 5, 2008 (eastbound) and April 15, 2008 (southbound)
- RLR Photo Enforcement Systems temporarily suspended: September 25, 2009
- RLR Photo Enforcement Systems re-activated: August 1, 2014 (southbound) and August 26, 2014 (eastbound)
Grand Ave. & Thatcher Ave. - Southbound Approach

Grand Ave. & Thatcher Ave. - Northbound Approach
Grand Ave. & Thatcher Ave. - Eastbound Approach

Grand Ave. & Thatcher Ave. - Westbound Approach
Average Daily Traffic

Data was obtained from the Illinois Department of Transportation’s website www.gettingaroundillinois.com.

Grand Ave. & Thatcher Ave. (Southbound)

- 36,100 (2005)
- 28,900 (2007)
- 25,100 (2009)
- 25,200 (2011)
- 26,800 (2013)
Data was obtained from the Illinois Department of Transportation’s website www.gettingaroundillinois.com.

Grand Ave. & Thatcher Ave. (Northbound)

- 30,600 (2005)
- 31,300 (2007)
- 26,700 (2009)
- 25,200 (2011)
- 26,800 (2013)
Average Daily Traffic Cont’d

Data was obtained from the Illinois Department of Transportation’s website www.gettingaroundillinois.com.

Grand Ave. & Thatcher Ave. (Eastbound)

- 23,100 (2002)
- 21,000 (2006)
- 21,700 (2010)
- 24,800 (2014)
Average Daily Traffic Cont’d

Data was obtained from the Illinois Department of Transportation’s website www.gettingaroundillinois.com.

Grand Ave. & Thatcher Ave. (Westbound)

- 25,000 (2002)
- 20,900 (2006)
- 21,500 (2010)
- 20,500 (2014)
Crash History and Analysis

- Table 1 includes crash data obtained from the Illinois Department of Transportation, detailing angle, turning, rear-end, and other type crashes occurring at the intersection pre/post RLR Photo Enforcement System installation.

Table 1

DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation, based upon information derived from multiple sources. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in prior years, since the data prior to 2015 was physically located by bureau personnel. Given the subjective nature of the reporting process, the modifications in the incident locating protocols and the changes to the crash reporting thresholds effective 2009, the Village of River Grove acknowledges the potential for discrepancies in the final conclusions drawn.
Crash History and Analysis (continued)

- Table 2 includes crash data obtained from the Illinois Department of Transportation, detailing angle, turning, rear-end, and other-type crashes occurring at the intersection on the southbound and eastbound approaches only, pre/post RLR Photo Enforcement System installation.

**DISCLAIMER:** The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation, based upon information derived from multiple sources. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in prior years, since the data prior to 2015 was physically located by bureau personnel. Given the subjective nature of the reporting process, the modifications in the incident locating protocols and the changes to the crash reporting thresholds effective 2009, the Village of River Grove acknowledges the potential for discrepancies in the final conclusions drawn.
Comparison of annual averages shows the total number of crashes decreasing by 40% at the intersection for all approaches and by 57% on the southbound and eastbound (photo enforced) approaches post-camera installation in 2015 compared to pre-camera installation averages (2005-2007). A comprehensive analysis cannot be completed for previous years as the RLR camera equipment was not active for the entire year in 2008, 2009, and/or 2014.

The US Department of Transportation Project Development and Design Manual states that turning, angle or head-on crashes have a number of probable crash causes, to include:

- Large volumes of left /right turns
- Large total intersection volume
- Excessive speed on approaches
- Inadequate traffic control devices
- Poor visibility of signals

While red light cameras cannot truly decrease the volume of cars entering the intersection, speed and proximity of vehicles entering an intersection or the amount of turning traffic volume, red light cameras and red light camera photo enforcement warning signs have the ability to reduce traffic crashes and improve compliance with traffic control devices.
Adjudication Experience

RLR camera violations are contested and adjudicated through an administrative hearing conducted each month. Adjudication data for the Village’s Automated Enforcement Program is shown below in Table 3.

Table 3

The high quality video footage and photographic evidence produced by the enforcement system is a contributing factor in a majority of the contested RLR violations being upheld by the Hearing Officer. The police officers assigned to review and approve/reject potential violations are vigilant in applying the same officer discretion and criteria they would if issuing an in-person citation, resulting in only highly prosecutable violations being mailed out.
